

QUALITY MANUAL

QUALITY POLICY

BS EN ISO 9001:2015

The Quality Assurance Manual is a statement of Quality Assurance policies and philosophies of Astell Scientific Ltd to design, manufacture and support products which meet our customers and industry requirements. We know that only well-designed products manufactured to the highest standards incorporating the latest technology can secure a long term and profitable future for all our employees.

Our high standard of service support must be maintained and continually developed to meet the continually changing expectations of our customers. It is our objective to maintain and build on our reputation within the market place both UK and worldwide.

To achieve this objective, Astell Scientific has structured the Quality Management System to encompass all aspects of the company's activities to meet the requirements of ISO 9001:2015. Astell Scientific is committed to compliance with all the requirements of its quality systems along with any other legal or regulatory requirements.

The Quality Assurance Manual and Procedures describe how the system is operated and adherence to these procedures, by all the company's management and personnel, ensures that the company's quality objectives are achieved.

The Quality Assurance Manual and procedures are externally and internally audited annually to ensure adherence by all company's management and personnel.

Whilst the operating and maintaining of the Quality Management System rests with the Quality Manager, it is the responsibility of every employee to use their skills and diligence to ensure that the high quality of the products and services are constantly improved and maintained.

The directors of Astell recognise that the ultimate responsibility of Quality throughout the company rests with them.
